

DHANANJAYAN R

Python Developer

6379087148 dhananjayan.on@gmail.com <https://github.com/dhananjayan-r>

<https://www.linkedin.com/in/dhananjayan-r-1b91b1148/>

Chennai, India

SUMMARY

Experienced Python Developer with a robust background in data science, machine learning, and full-stack development. Proficient in Python 3 and key libraries such as NumPy, Pandas, TensorFlow, and OpenCV. Skilled in database querying (SQL), AWS S3, and EC2 environments. Strong in Bash Shell scripting, Git, and Github. Accomplished in web development using Flask and Streamlit frameworks. Led successful genomics projects at Genome International, showcasing expertise in AJAX, JavaScript, Python, Shell Scripting, AWS, and Linux. Current role at TNQ Technologies involves Rest API-based applications with Python, RabbitMQ, Redis, Docker, and Nginx. Recognized for contributions in ML NER projects and achieving 2nd runner-up in a GENAI hackathon. Demonstrates excellence in software development practices and strategic problem-solving. Proven track record in driving corporate performance through data analytics.

EXPERIENCE

Software Developer (python)

TNQ Technologies 🏢 01/02/2023 – 21/02/2025 📍
Chennai 🌐 <https://www.tnq.co.in/>

TNQ Technologies is a leading STM publishing services and technologies company headquartered in Chennai with offices in Coimbatore, London, Toronto.

- Managed a Rest API-based application involving RabbitMQ, Redis, Python, Docker, AJAX, JavaScript, Nginx, and SQL, Swagger API.
- Successfully executed a project focused on queuing, Python, and domain-specific requirements, demonstrating a phased strategy for HTML element extraction and advanced tasks like pattern matching and XML tag addition.
- Explored ML NER-based projects using MLflow for MLOps.
- Achieved 2nd runner up prize in a GENAI hackathon for an AI-based smart configuration project.

Junior software programmer (Python)

Genome International India Pvt Ltd 🏢 01/06/2021 -31/01/2023 📍
Chennai 🌐 <https://www.genome.com/>

Founded 1992, Genome International is a Bio-IT company that provides innovative software products and services in clinical genomics and Information Technology.

- **Interned from January 2021 to May 2021 before transitioning to a full-time developer role in June 2021**, actively contributing to projects involving Python (Flask) for backend processes, JavaScript for frontend, and PHP at Genome International's Research and Development team.
- Spearheaded the transformation of existing architectures to Flask-dependent structures for REST API middleware, collaborated on projects implementing AWS EC2, Shell scripting, Python pandas library, HTML, CSS, and Amchart in JavaScript for dataset manipulation and dynamic website deployment.
- Demonstrated expertise in web scraping using BeautifulSoup and Selenium WebDriver, with a focus on gene cards and research articles. Applied Biocurator techniques, including natural language processing for entity detection, showcasing a comprehensive skill set in data curation.

SKILLS

Programming & Markup Languages

Python **Javascript** **JSON** **XML**

OOPS **HTML**

Database & Query language

MySQL **Redis** **SQL** **CouchDB**

PostgreSQL

Message Brokers & Containerization

RabbitMQ **Docker**

Web Development

Flask **FastAPI** **Streamlit** **HTML**

CSS **jQuery** **REST API**

Swagger API **Nginx**

Tools, API documentation, IDE & OS

Open API **Postman**

Visual Studio Code **Linux** **Windows**

Ubuntu **JIRA** **Open AI**

Jupyter Notebook

EDUCATION

Bachelor of Engineering , Mechanical GPA
Annamalai University  2015 - 2019 **8.65 / 10**

- Capstone project: Experimental Studies on Solar Still.
Goal to attain subsistence in water purification at homes achieved
producing 120 ml per sun hour in 8 Sq.ft area.

PROJECTS

Colorizer

 <https://github.com/dhananjayan-r/Colorizer>

- Image colorization is the process of taking an input grayscale (black and white) image and then producing an output colorized image that represents the semantic colors and tones of the input (for example, an ocean on a clear sunny day must be plausibly blue— it can't be colored hot pink by the model). Technology used are built in Python using Opencv , Streamlit libraries.

LinkedIn Scraper

 https://github.com/dhananjayan-r/Linkedin_scraper

- Written a python script to scrape all jobs from LinkedIn in a particular time frame(yesterday/ last month).Store details of the scraped jobs (like the Job Description, Hiring manager name, Company name, Email id of hiring manager etc) in a database of your choice. Technologies used built in Python using Selenium and beautiful soup libraries.

Swagger API

 <https://github.com/dhananjayan-r/Swagger-open-api>

- A Simple Swagger api application can be used as a template to start with Open API & Swagger API.

Flask API & EDA

 https://github.com/dhananjayan-r/TNQ-API_TASK &
https://github.com/dhananjayan-r/TNQ_EDA

- An Flask API template. & EDA

SKILLS

Libraries (ML,Scraping,Data analysis)

MLfow **pandas** **Advanced Regex**

Numpy **OpenCV** **OCR tesseract**

BeautifulSoup **Spacy** **NER**

Sci spacy **Matplotlib** **Seaborn**

AM chart **BOTO**

Happy Transformers **Serrant Nltk**

Hugging face **Lang chain**

Version Control

Git **GitHub** **GitLab** **Kaggle**

Cloud Services:

AWS S3 **AWS EC2**

TRAINING / COURSES

The data science course by 365 careers 2019.

Issuing Organization : 365 careers.
Credential ID : UC-a2b3e294-4507-48d7-95a5-915e4319dd18
Credential URL : <https://udemy-certificate.s3.amazonaws.com/pdf/UC-a2b3e294-4507-48d7-95a5-915e4319dd18.pdf>

Python for data science and machine learning.
